

Pay one price, backup all year.

## BYTEBAQ PROFESSIONAL OFFSITE BACKUP SERVICE

**What is Bytebaq Professional?** Bytebaq is a professionally vaulted offsite backup service that will automatically backup all the data on a workstation, laptop or server. When data is lost, recovering the missing information is a simple and straightforward process.

The subscription fee is based on backing up all the data on a computer for a full year. It does not matter how much data exists on the protected computer.

### How it works.

**Default setting.** After you install the Bytebaq agent on your customer's computer, no further set up is needed. The service will default to compressing, encrypting and continuously backing up all data whenever it is connected to the Internet.

**Advanced setting.** After installing Bytebaq you can setup different backup sets for different types of data. You can also control bandwidth use by setting up different backup profiles.

**Data recovery.** Recovering data over the Internet is a simple point and click process. However, if the volume of data to recover exceeds bandwidth capacity, encrypted USB disks can be delivered directly to your office.

**Customer management.** Includes everything you need to manage and monitor your customer's backups from the comfort of your offices.

<b>Bytebaq Professional Packages</b>	■	Bytebaq Professional PC Edition
	■	Bytebaq Professional Server 500
	■	Bytebaq Professional Server 1000
	■	Bytebaq Professional Server 2000

### Features

- Total or selective backup as required
- Continuous data protection (CDP)
- Stores up to 3 file versions
- 256-bit AES military grade encryption

- Data retention extension option
- Centralised reporting

### Benefits

- No employee time wasted on backups
- Fixes the cost of backup
- Offsite backup increases business security
- More reliable than tape
- Easy to monitor

Easy to set up. Easier to sell.

## BYTEBAQ FOR RESALE

Bytebaq is easy to setup and easier to sell. The service provides unlimited backup for PCs or servers with up to 2 terabyte drives (Server Edition 2000). In addition to the service agent, we provide our resellers with a web-based control panel to monitor their customer accounts. Bytebaq Professional increases both your margin and efficiency, making it a clear choice over DIY offsite backup solutions.

There are a number of models for delivering Bytebaq to your customers.

**Website or email marketing.** A registration link will download Bytebaq onto your customer's computer. DataFort handles the payment and will credit your reseller account with the commission.

**IT support company.** We invoice you and you bill your customer directly or bundle the service into a support package. You set up the service on your customer's computers. You will be billed 30 days after installation for each new account.

**Retail shop.** Place the Point of Purchase display we provide near your till, and make sure the poster is clearly visible so you attract a high number of customers. We provide business sized cards customised with an activation code that will credit a commission for each account originating from your shop.

**Equipment installation.** We provide a brief dynamic advertisement which you install on each computer you sell or repair. The customer clicks a link to register their account and we will issue the appropriate commission to your reseller account (only available for Bytebaq PC Edition).

**Catalogue sales.** We'll provide you with art to add Bytebaq to your catalogue. Boxed CDs are paid for in advance and provided with a unique activation code so you can track account initiation (minimum purchase required).
